SUMMARY

React JS Developer (1 year experience) who independently leads a multi-tenant CMS platform integrating React with SharePoint and Microsoft Graph API, alongside reusable UI components and automation tooling. Comfortable across the stack — from React front-end architecture to backend API integration and cloud configuration — with growing exposure to Power Automate, Spring Boot, and AI agent tooling.

TECHNICAL SKILLS

Frontend: React JS, JavaScript (ES6+), HTML5, CSS3, PnP JS

Integrations: Microsoft Graph API, PHP, Azure AD App Registrations & Permissions

SharePoint: SPFx, Site/Tenant Administration, Groups & Permission Levels

Backend & Data (growing): Core Java, Spring Boot (basics), PostgreSQL (basics), Power Automate (learning)

Other: Git, Data Structures & Algorithms, AI Agents & MCP (awareness)

PROFESSIONAL EXPERIENCE

Software Developer — Smalsus Infolabs Private Limited, Greater Noida

Sep 2025 – Present

- **Lead & independently develop** WebStudio, a multi-tenant CMS platform provisioning SharePoint-backed sites paired with a synchronized public React front-end (full details under Key Projects) — currently powering 3 live production sites, including two for German clients.
- **Build reusable, production-grade React components** — e.g. an image management tool with cropping, rotation, metadata handling, folder-based organization and search — integrated into 3-4 projects including WebStudio, SVD, and the Task Management tool.
- **Integrate React applications with backend services** via a custom PHP layer and Microsoft Graph API, including Azure AD app registration and application-level permissions for secure public data access.
- **Prototype new architecture and AI-driven features** — including an alternative domain-hosting approach for SharePoint-backed sites and AI agents for translation and theme generation.
- **Maintain and stabilize** an internal Operational Task Management Tool (OTM) by resolving bugs and functionality issues; contribute to workspace/marketplace components on the SVD project and internal tooling (deployment, backups, AI/MCP R&D).

KEY PROJECTS

WebStudio — Multi-Tenant CMS Platform (Lead Developer) — React JS, SharePoint, PnP JS, PHP, Microsoft Graph API, Azure AD, MSAL

- Sole developer of a platform that spins up a dedicated SharePoint site per client — the solution auto-creates required lists/libraries via PnP JS if not already present, then provisions a new CMS site end-to-end.
- Built an exact-mirror React application that acts as a live public preview of the SharePoint site: SharePoint stays fully editable while the React app remains read-only, kept in sync via a Graph API-powered PHP backend (including document/image access via drive IDs).
- Configured Azure AD app registrations with SharePoint and Graph API permissions (application-level Sites.ReadWrite.All), validated with Graph Explorer; new client sites are spun up quickly via .env-based configuration.
- Added AI-driven features: a translation agent (default English, translatable to German, Spanish and French) and a theme-generation agent with manual override.
- R&D: engineered an alternative architecture letting the editable/view site be hosted on the client's own domain via Azure — using SharePoint's delegated permission to generate a public access token with no extra auth layer, plus MSAL-based admin authentication for edit mode — so clients keep SharePoint as their database while gaining domain flexibility.
- Currently powers 3 live production sites, including two for German clients (a political organization and a consulting firm).

SharePoint Image Management Component — React, SharePoint, JavaScript

- Reusable component for a site's picture library — upload, crop, rotate, transform and edit metadata, with folder-wise organization and fast, friendly search — now integrated into 3-4 projects (WebStudio, SVD, Task Management tool).

MS Teams Chat Exporter — Microsoft Graph API, JavaScript

- Dynamic tool to export Teams chats and shared resources with year/date-wise filtering, authenticated per logged-in user using Graph chat and channel permissions.

EDUCATION

Master of Computer Applications (MCA)

2025 – Present

Accurate Institute of Management and Technology, Greater Noida — Dr. A.P.J. Abdul Kalam Technical University, Lucknow

Bachelor of Computer Applications (BCA)

2022 – 2025

D.S. College, Aligarh — Raja Mahendra Pratap Singh State University, Aligarh
