SUMMARY

SharePoint Developer (1 year experience) with admin-level expertise in site/tenant administration, SharePoint groups, and Azure AD permissions, combined with strong Microsoft Graph API integration and React front-end skills. Independently leads a multi-tenant, SharePoint-backed CMS platform used by live production clients, and is actively building Power Automate expertise.

TECHNICAL SKILLS

SharePoint: Site & Tenant Administration, SharePoint Groups, Permission Levels, SPFx, PnP JS

Cloud & Identity: Azure AD App Registrations, Application/Delegated Permissions, MSAL Authentication

Integrations: Microsoft Graph API, PHP, React JS, Power Automate (in progress)

Backend & Data (growing): Core Java, Spring Boot (basics), PostgreSQL (basics)

Other: Git, Data Structures & Algorithms, AI Agents & MCP (awareness)

PROFESSIONAL EXPERIENCE

Software Developer — Smalsus Infolabs Private Limited, Greater Noida

Sep 2025 – Present

- **Lead & independently develop** WebStudio, a multi-tenant CMS platform provisioning a dedicated SharePoint site per client with a synchronized public React front-end (full details under Key Projects) — currently powers 2 live production sites, including two for German clients.
- **Engineer secure SharePoint data access at scale** using Microsoft Graph API, Azure AD app registrations, and application-level permissions (e.g. Sites.ReadWrite.All); validate integrations using Graph Explorer.
- **Design and build reusable SharePoint components**, including an image management tool (upload, cropping, rotation, transformation, metadata) for a site's picture library — now integrated into 3-4 projects including WebStudio, SVD, and the Task Management tool.
- **Develop a Microsoft Teams Chat Exporter** that exports chats and shared resources with dynamic date/year-based filtering, authenticated as the current logged-in user via Graph API permissions (Chat.ReadWrite.All, Chat.Read, Channel access).
- **Investigate and deliver an alternative hosting architecture** allowing SharePoint-backed sites to be hosted on a client's own domain via Azure and MSAL-based admin authentication — removing the need for a dedicated SharePoint front-end while keeping SharePoint as the data layer, per client requirement.
- **Maintain the internal Operational Task Management Tool (OTM)** (bug fixes, stability) and contribute to the SVD project and internal tooling (deployment, data backup, AI/MCP R&D).

KEY PROJECTS

WebStudio — Multi-Tenant, SharePoint-Backed CMS Platform (Lead Developer) — *SharePoint, PnP JS, Azure AD, Microsoft Graph API, MSAL, PHP, React JS*

- Sole developer of a platform provisioning a dedicated SharePoint site per client — auto-creating required lists/libraries via PnP JS if not already present — then spinning up a new CMS site end-to-end.
- Built an exact-mirror React application as a live public preview: SharePoint remains fully editable while React stays read-only, synced via a Graph API-powered PHP backend (including document/image access via drive IDs).
- Configured Azure AD app registrations and application-level permissions (Sites.ReadWrite.All) for secure public access, validated with Graph Explorer; new client sites are spun up quickly via .env-based configuration.
- Added AI-driven multilingual translation (default English, translatable to German, Spanish, French) and AI-assisted theme generation with manual override.
- R&D: designed an alternative hosting model letting clients keep SharePoint as the database while serving the editable/view site from their own domain — using SharePoint's delegated permission to generate a public access token (no extra auth) plus MSAL-based admin authentication for edit mode — solving a real client requirement.
- Currently powers 2 live production sites, including two for German clients (a political organization and a consulting firm).

SharePoint Image Management Component — *SharePoint, JavaScript, React*

- Reusable picture-library component supporting upload, cropping, rotation, transformation and metadata handling, with folder-based organization and fast search — integrated into 3-4 projects including WebStudio, SVD, and the Task Management tool.

MS Teams Chat Exporter — *Microsoft Graph API, Azure AD Permissions*

- Dynamic export tool for Teams chats and resources with year/date-wise filtering, authenticated per logged-in user using Graph permissions (Chat.ReadWrite.All, Chat.Read, Channel access).

EDUCATION

Master of Computer Applications (MCA)

2025 – Present

Accurate Institute of Management and Technology, Greater Noida — Dr. A.P.J. Abdul Kalam Technical University, Lucknow

Bachelor of Computer Applications (BCA)

2022 – 2025

D.S. College, Aligarh — Raja Mahendra Pratap Singh State University, Aligarh
